▶ Georgia's historic drought and ongoing water supply concerns has continued to called attention to the importance of water conservation and water-smart landscape and gardening practices. People everywhere are seeking ways to minimize their water use, yet maintain an attractive landscape. Rain barrels can be part of the solution. Just look outside your window the next time it rains and imagine all the water that's running down your driveway being put to beneficial use in your garden and landscape. Join us for our Rain Barrel Workshop to learn more and take home your very own 55 gallon rain barrel. Be sure to drive a vehicle which can carry your 55 gallon rain barrel.

Barrels are a 55 gallon capacity and come equipped with spigot, overflow adaptor, and debris filter.
